Constraints Consulting

Our mission…
Constraints Consulting, Ltd. applies the thought processes of the Theory of Constraints to identify, exploit and if necessary elevate the constraints that are potentially blocking performance of a department, plant, school, supply-chain, university, or (non-profit) organization. We provide our clients the best possible value, while generating the profits necessary to continuously improve their products and services.

Our consultants strive to work on your business, providing an 'Outside Look In' perspective on your business and free from lenses fogged with wrong/outdated assumptions.

Bringing about increased business performance based on the following modes of operations and tools…

1. The Theory of Constraints (TOC)
2. Critical Chain Project Management (CCPM)
3. Drum-Buffer-Rope (DBR)
4. Throughput Accounting (TA)
5. The TOC Thinking Processes (TP)
6. Demand Planning - Buffered Replenishment (DPBR)

About Constraints Consulting
Located in Ontario Canada, Constraints Consulting is able to support customers throughout North America and Western Europe. Our team of well-seasoned consultants utilizes a proven systems approach to enable our valued customers to increase their Net Profit, ROI, and Cash Flow, reduce inventory, shorten lead times, provide higher levels of service and deliver compounded throughput through their entire supply chain.

Applying the Theory of Constraints along with asking the right questions leads to simple answers to the following three questions: “What to change?”, “What to change to?” and “How can we cause and maintain this change?”. The answers to these questions provide a strategy allowing us to remove the limitation that is blocking growth and higher net profit within our clients’ companies.

Our Clients:

PRODUCT BASED
Supporting product based businesses to bring more value to their customers by utilizing current resources to sell and support a much higher amount of products during the same period of time.

PROJECT BASED
Enabling project based businesses to bring more value to their customers by utilizing current resources to plan and deliver a much higher amount of completed projects given the same period of time.

SERVICE BASED
Empowering service based businesses to bring more value to their customers by providing a higher level of service given the same resources and period of time.

What We Do...

At Constraints Consulting we treat your goals as our own. Using a unique approach, we assist in identifying not only what to change and how to change but why to change. By answering these simple questions we focus on unlocking hidden capacity to a well-defined end-goal.

What We Value...

We are proud to uphold an ethical, value driven, professional, and confidential service. Providing a hands-on, on-site service in combination with implementation, strategy, software, and mechanical automation, we intend to bring both tangible and visible value to businesses big and small.

How We Do It...

Aligning resources and capacity towards greater profitability, by providing a mode of operations that removes root cause limitations that are responsible for diminishing returns on investment.

TOC brings about a Process of On-Going Improvement (POOGI), turning the constraint(s) into the leverage point, scientifically, to increase performance, resulting in obtaining more of the goal, given the same time and resources.

Constraints Consulting - Leadership Group...

Peter Mol – Owner/Consultant

Peter has been studying the Theory of Constraints since 2001, when one of his co-workers handed him a copy of "Necessary but not sufficient" by Eliyahu M. Goldratt. Since then Peter has been a consultant to many industries, including aluminum, brass, copper, retail, steel foundries, engineering firms, automotive, food, and material handling companies. Peter has had the opportunity to provide reliable consulting services for over 500 manufacturing plants and hundreds of OEMs and their B2B Supply Chain. He has a very unique approach to getting at the core limitations and creates a cooperative team-based structure to address the needs of your organization.

April Eden – Consultant

April is a knowledgeable implementation consultant and integrates her work experiences and education to help organizations increase their overall performance. With a hands-on background in forensics, food service, manufacturing and complex project management, she skillfully applies CCPM and TOC to bring about a Process of OnGoing Improvement to local and worldwide institutions. April prides herself in making a difference and providing value to others, taking each project she works on to an exciting and rewarding level for herself and the client.
